

The right services to help you successfully plan, build and operate your network

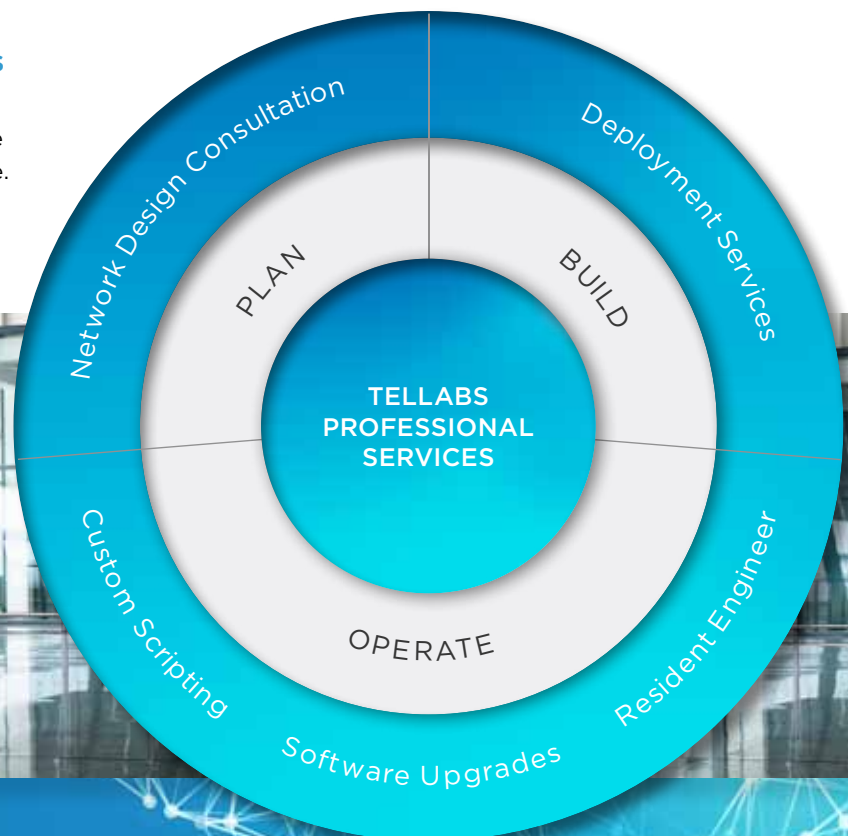

Developing the best network is more than just connecting switches, boxes and cables. It's about understanding how people use the network, the applications it supports, the services it delivers and what's next. Whether it's for a home or hospital, corporation or college, hotel or high-security government agency, Tellabs has that expertise.

The Tellabs Professional Services team partners with you to get the most out of your network. They have deep expertise in every stage of the network life cycle. By first identifying your goals, the Tellabs team helps you design, deploy and manage the network with the best practices and tools for your specific needs.

The result is a network that is fine-tuned to boost performance and resiliency to make sure that your applications and services are always available.

Tellabs Professional Services Offerings

Tellabs Professional Services offers the right mix of network experts and services to simplify and reduce costs during every phase of your network's life cycle.

Plan

Network Design Consultation

Proper planning and design speed the development of your network and your ability to quickly turn up services. The Tellabs Professional Services team provides whatever level of assistance you need to configure and provision your network architecture.

Case Study: *A Tellabs client was rolling out services for a large off-campus housing facility. Originally, a single VLAN supported all traffic, making it difficult to manage peak flows or isolate problems for troubleshooting. Tellabs Professional Services helped the provider analyze how Tellabs equipment could best be utilized and separate traffic into multiple logical VLANs. Additionally, the Tellabs team identified key features in the system that weren't being utilized for loop detection and port auto-disablement, which enable faster trouble detection and resolution. This best practices-based solution is now standard for every campus housing facility deployed by the provider.*

Build

Deployment Services

The Tellabs Professional Services team or individual applies extensive knowledge of Tellabs solutions to quickly deploy and test equipment with minimal impact to existing operations. Your internal staff stays focused on core business.

Case Study: *Most Tellabs clients manage multiple moving action items and partners when updating their network or installing new equipment. Tellabs Professional Services takes ownership of provisioning and testing Tellabs equipment, so you can stay focused on managing the big picture. You have peace of mind that the Tellabs team will expertly take care of any issues before handing off an optimized solution that's ready to go.*

Operate

Resident Engineer

Tellabs Professional Services can provide an on-site engineer to share critical product knowledge with your staff for all aspects of operating, growing and maintaining the Tellabs-enabled network. Subject matter experts are available as needed during "go-live," network expansion and other vital projects.

Software Upgrades

Tellabs Professional Services provides experts to manage the process of upgrading software on Tellabs equipment from start to finish, freeing your staff to stay focused on their key duties.

Custom Scripting

Tellabs Professional Services custom designs scripts to automate tedious yet critical tasks that could take your staff hours to complete.

Case Study: *A large university recently deployed a Tellabs solution to support point-of-sale systems, televisions, phones and wireless access points at their sports stadium, which can hold more than 100,000 people. Tellabs Professional Services is a key partner for the school's network team, providing a resident engineer on-site during the football season to make sure that the system operates at peak performance.*
